CS 410 Project Progress Report - Improving a System (EducationalWeb)
11/29/2020

1. So far, we have made some progress on our project itself; we believe we are close to finishing the bulk slide downloader.
2. Remaining tasks we have to complete are finishing the bulk downloader, scaling up the system, and improving the UI where necessary.
3. Challenges we are currently facing are that although the bulk downloader works, it only downloads the first 10 slides of each weekly course lecture. Additionally, there is a lot of code to navigate (220,000+ lines of code in one of the files), so it takes a while to figure out where we can implement what we proposed in our project proposal.
